

The >> Director

Each of us now directs >> a crew of agents.

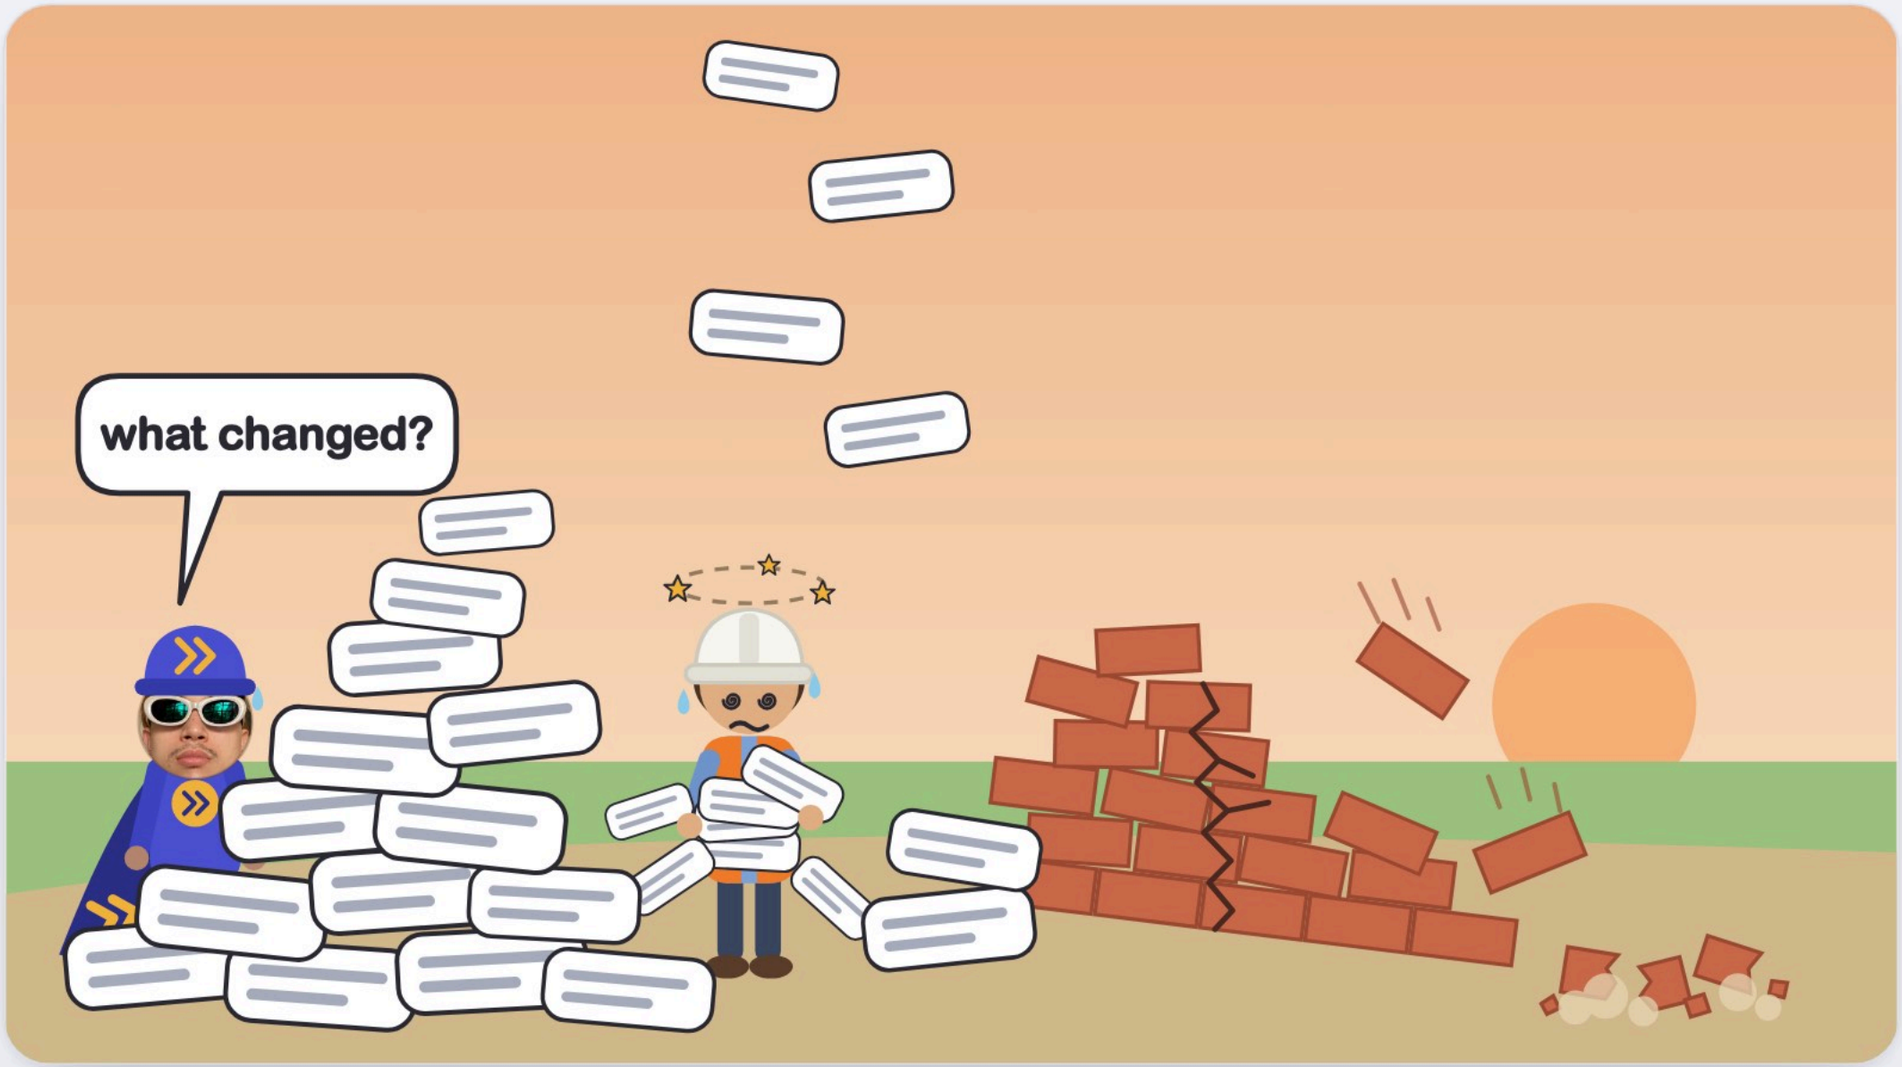

Each manager is a session;
each worker, a subagent.

Some sites wait on others: the tower needs its foundation.

Every turn, every site: where are we, how did we get here, what's left?

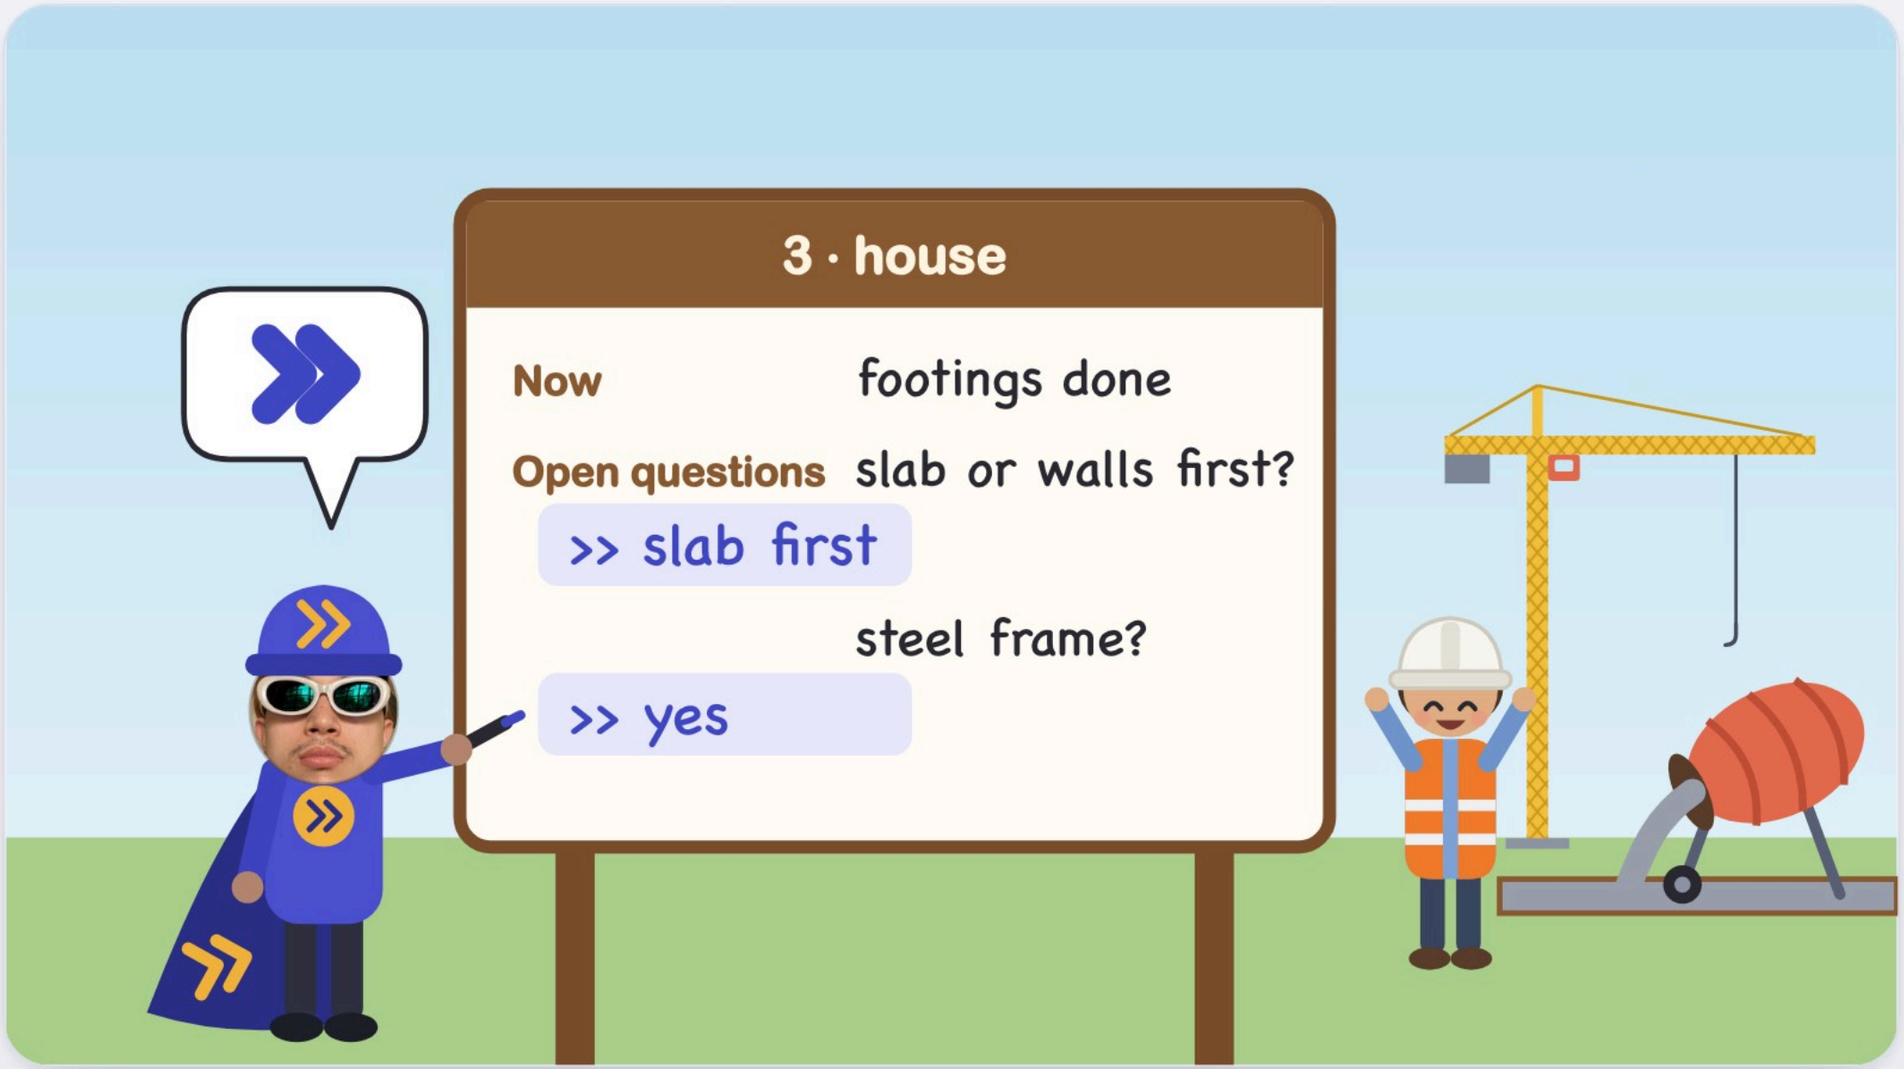

A long thread piles up: work slips, and changes get lost.

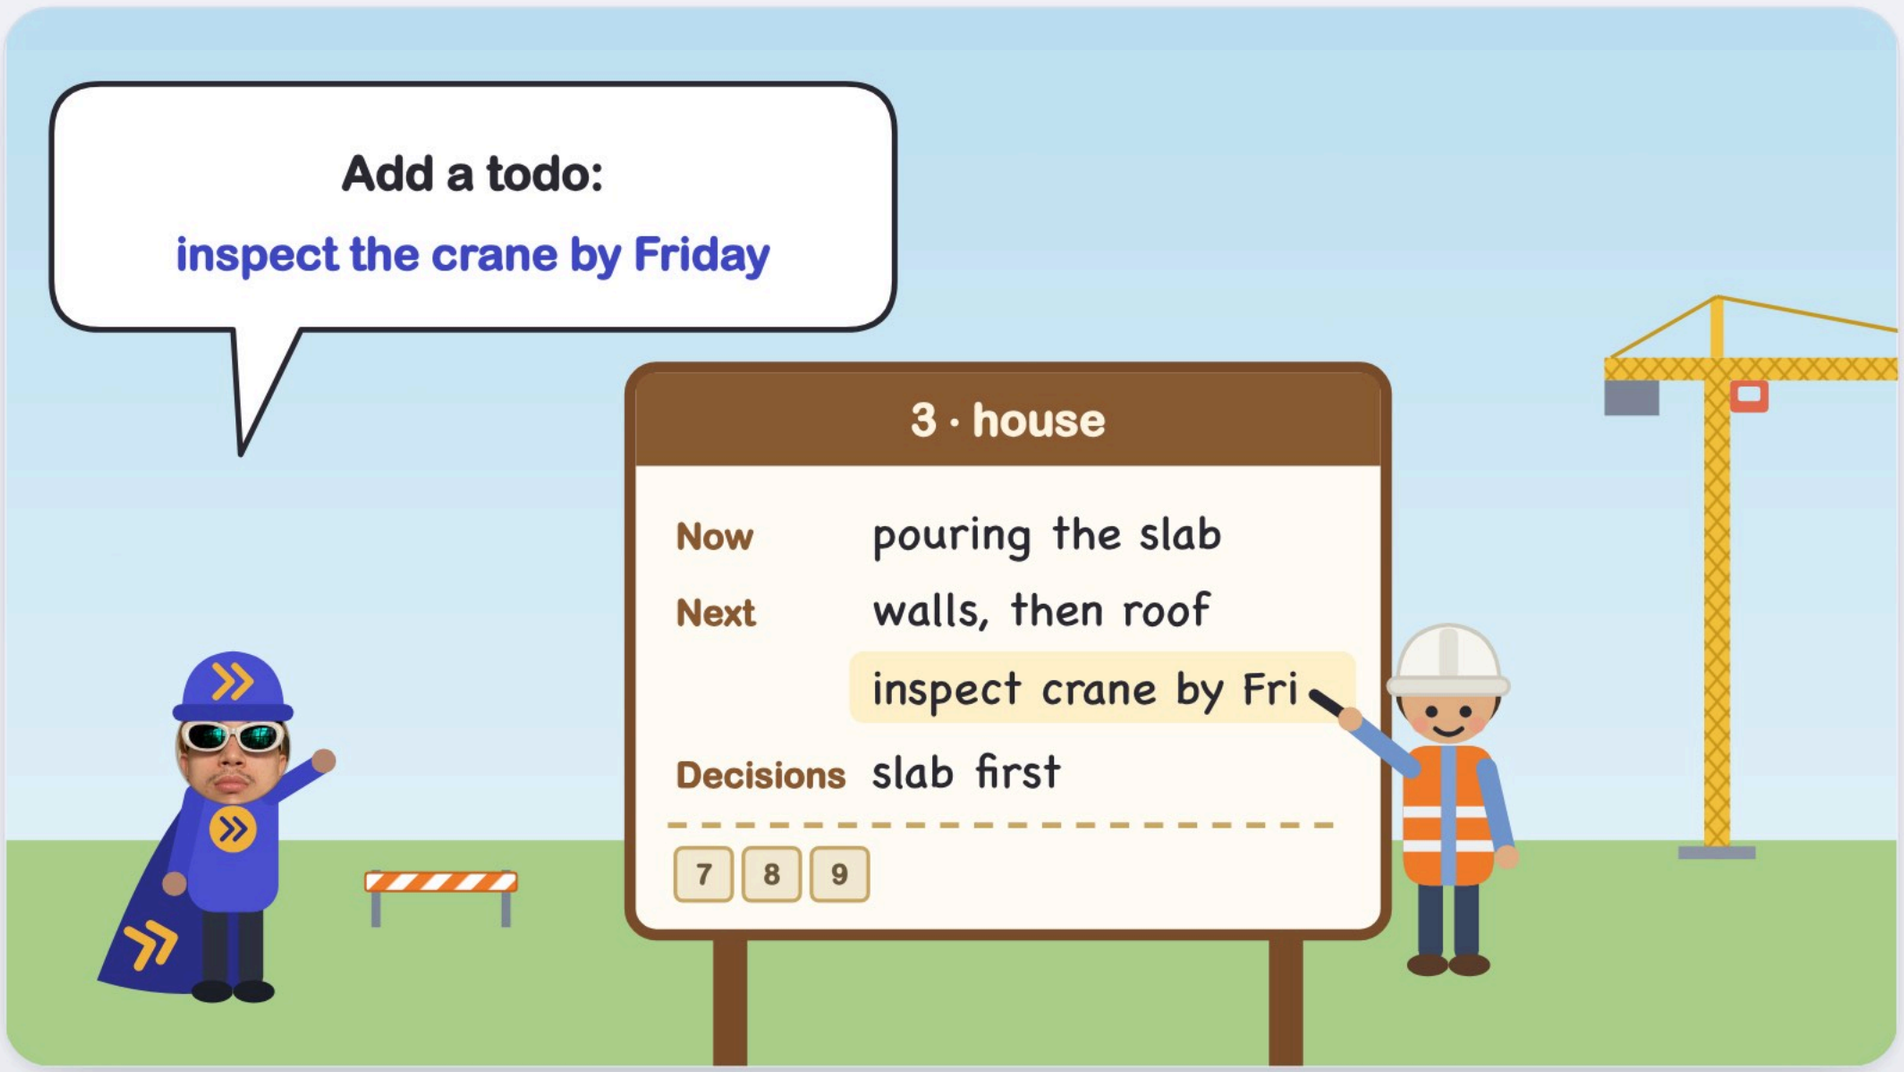

Before: private notes the Director couldn't check, rotting as the thread grew.

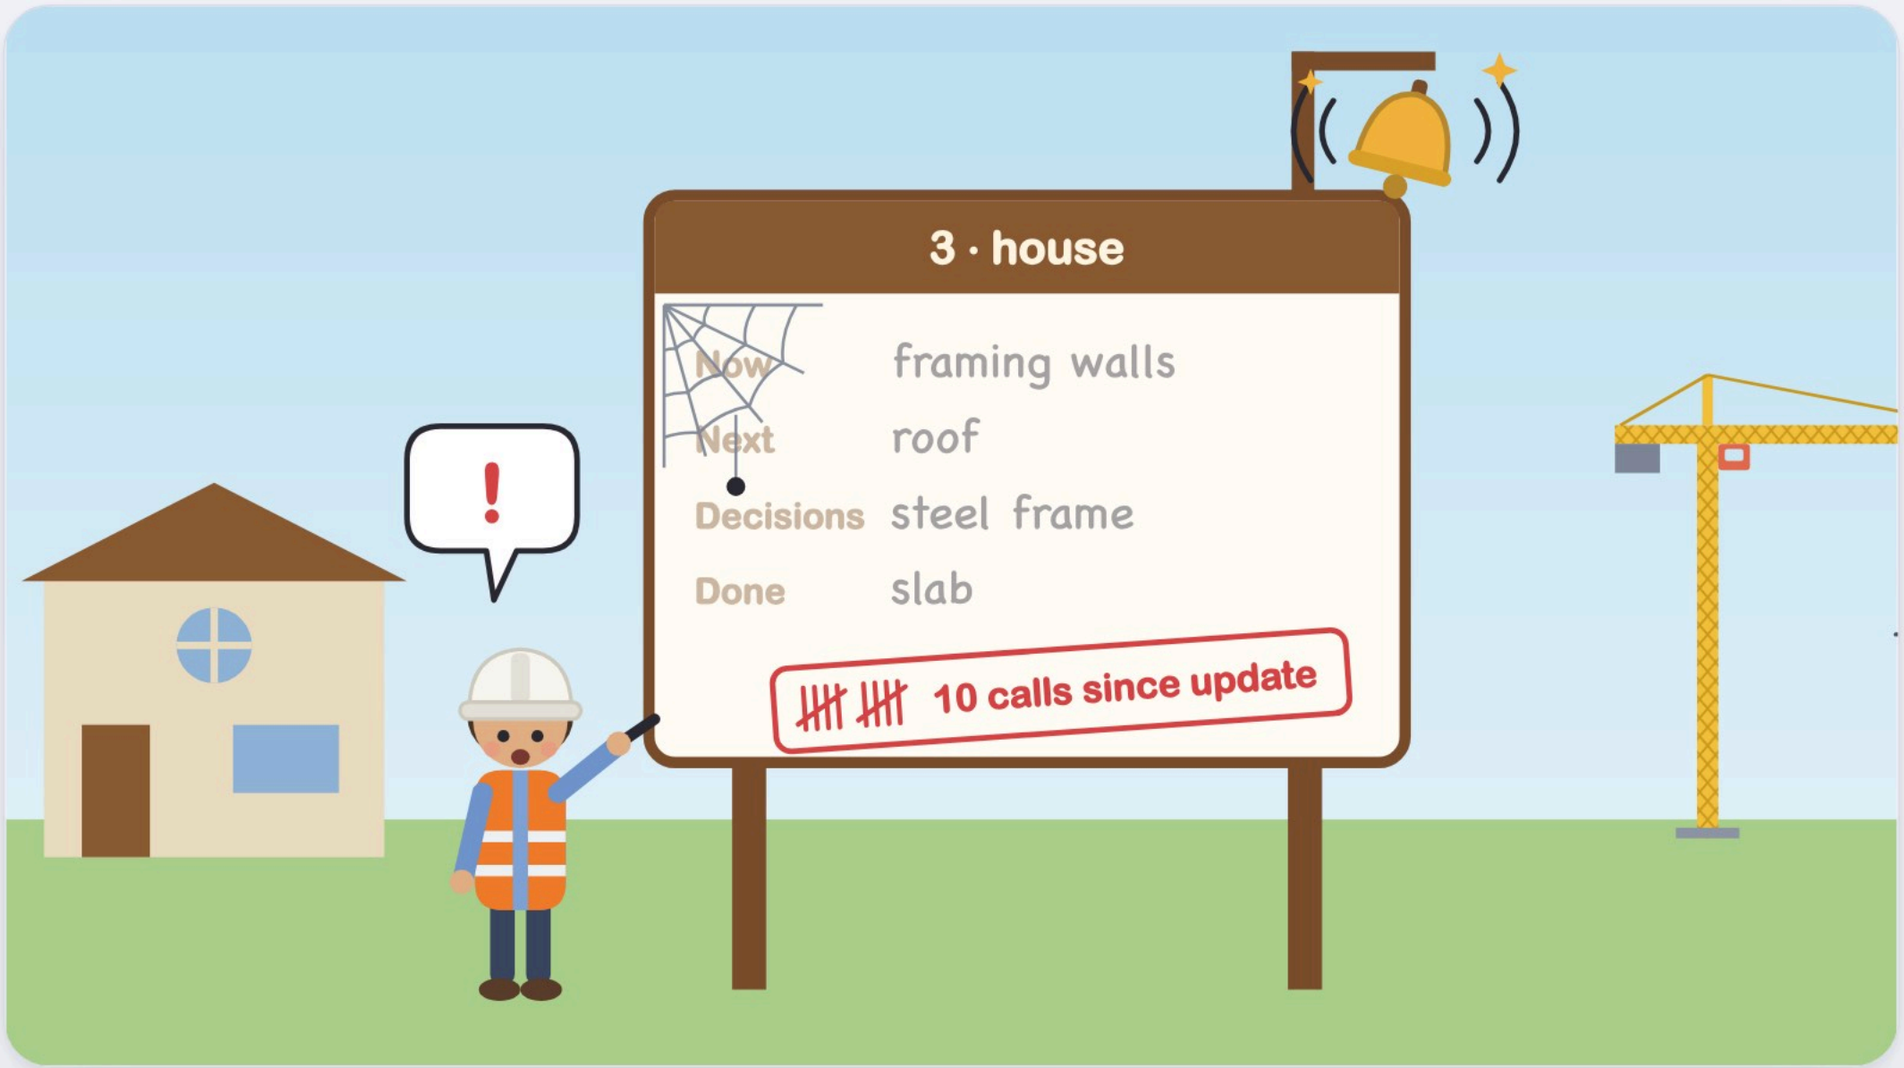

Now a board at the gate serves both of them.

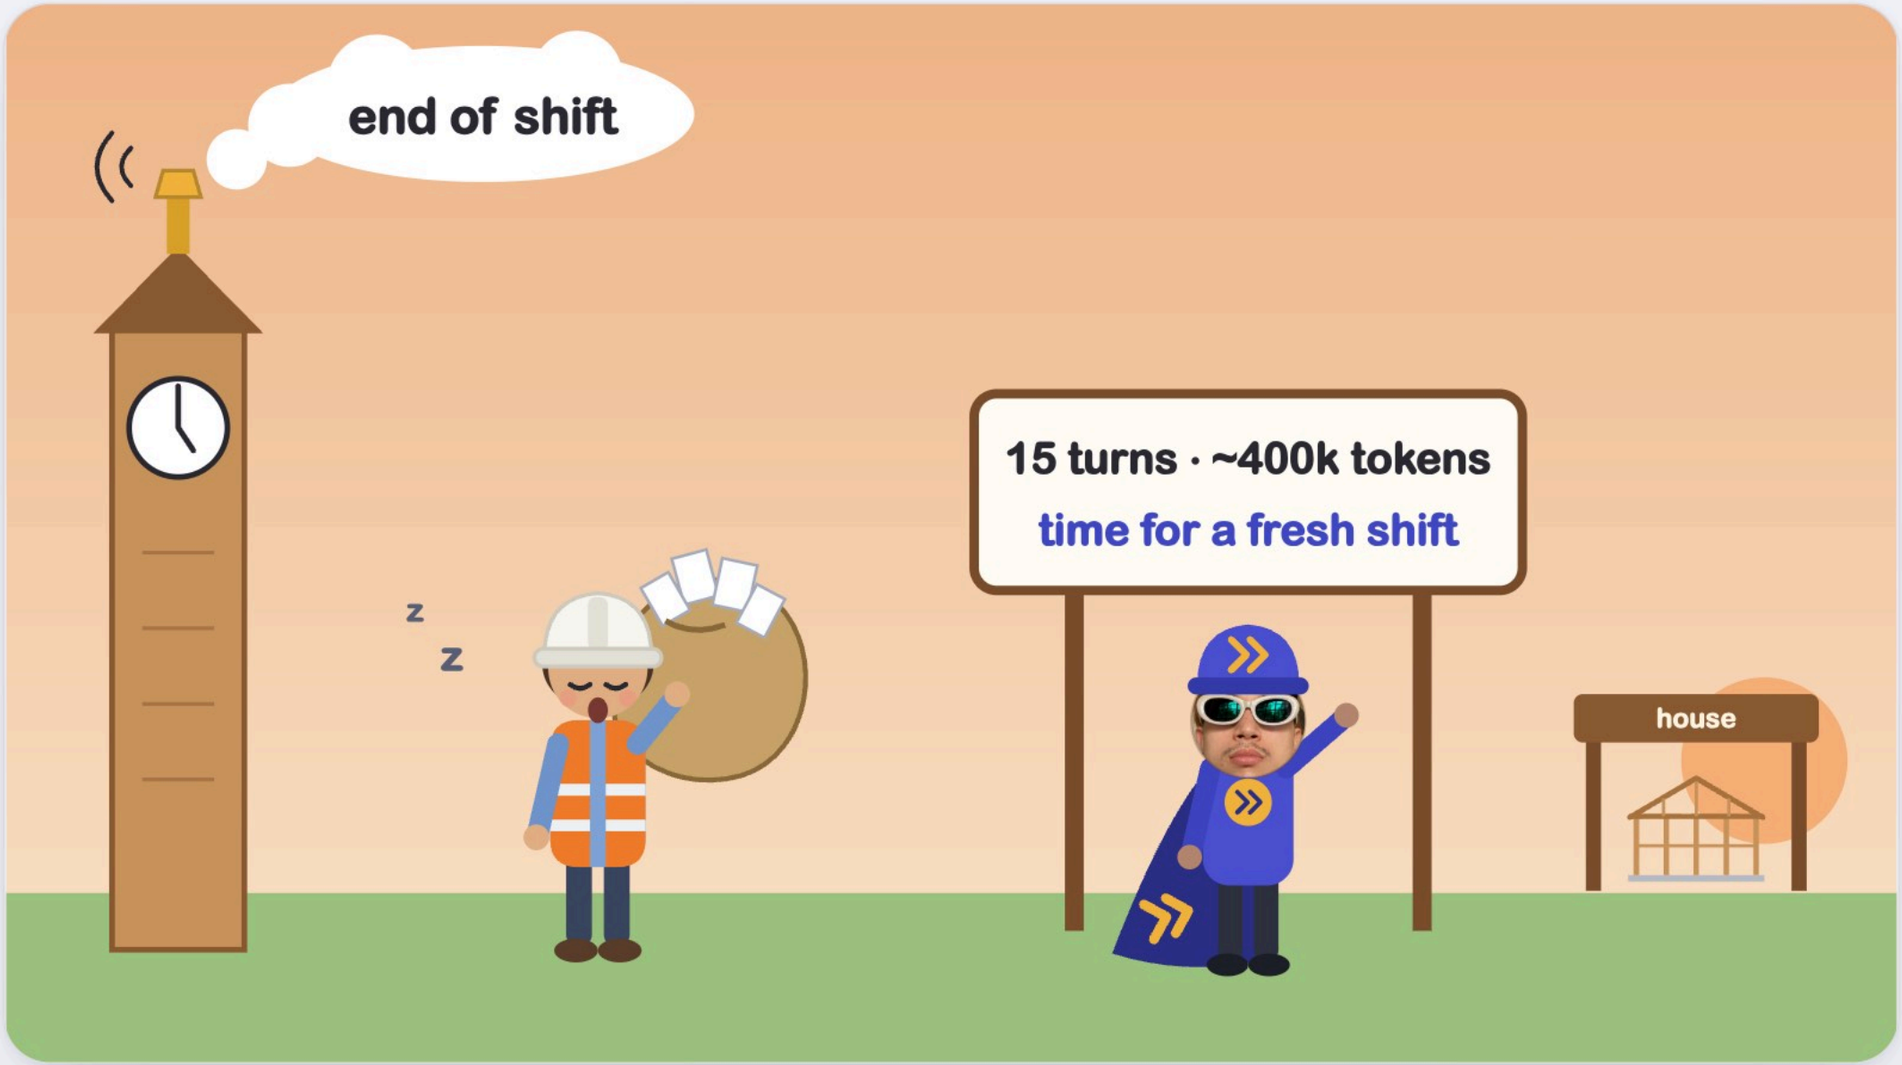

The Director directs at the exact line, then sends >>.

Add a todo anytime. It stays on the board until done.

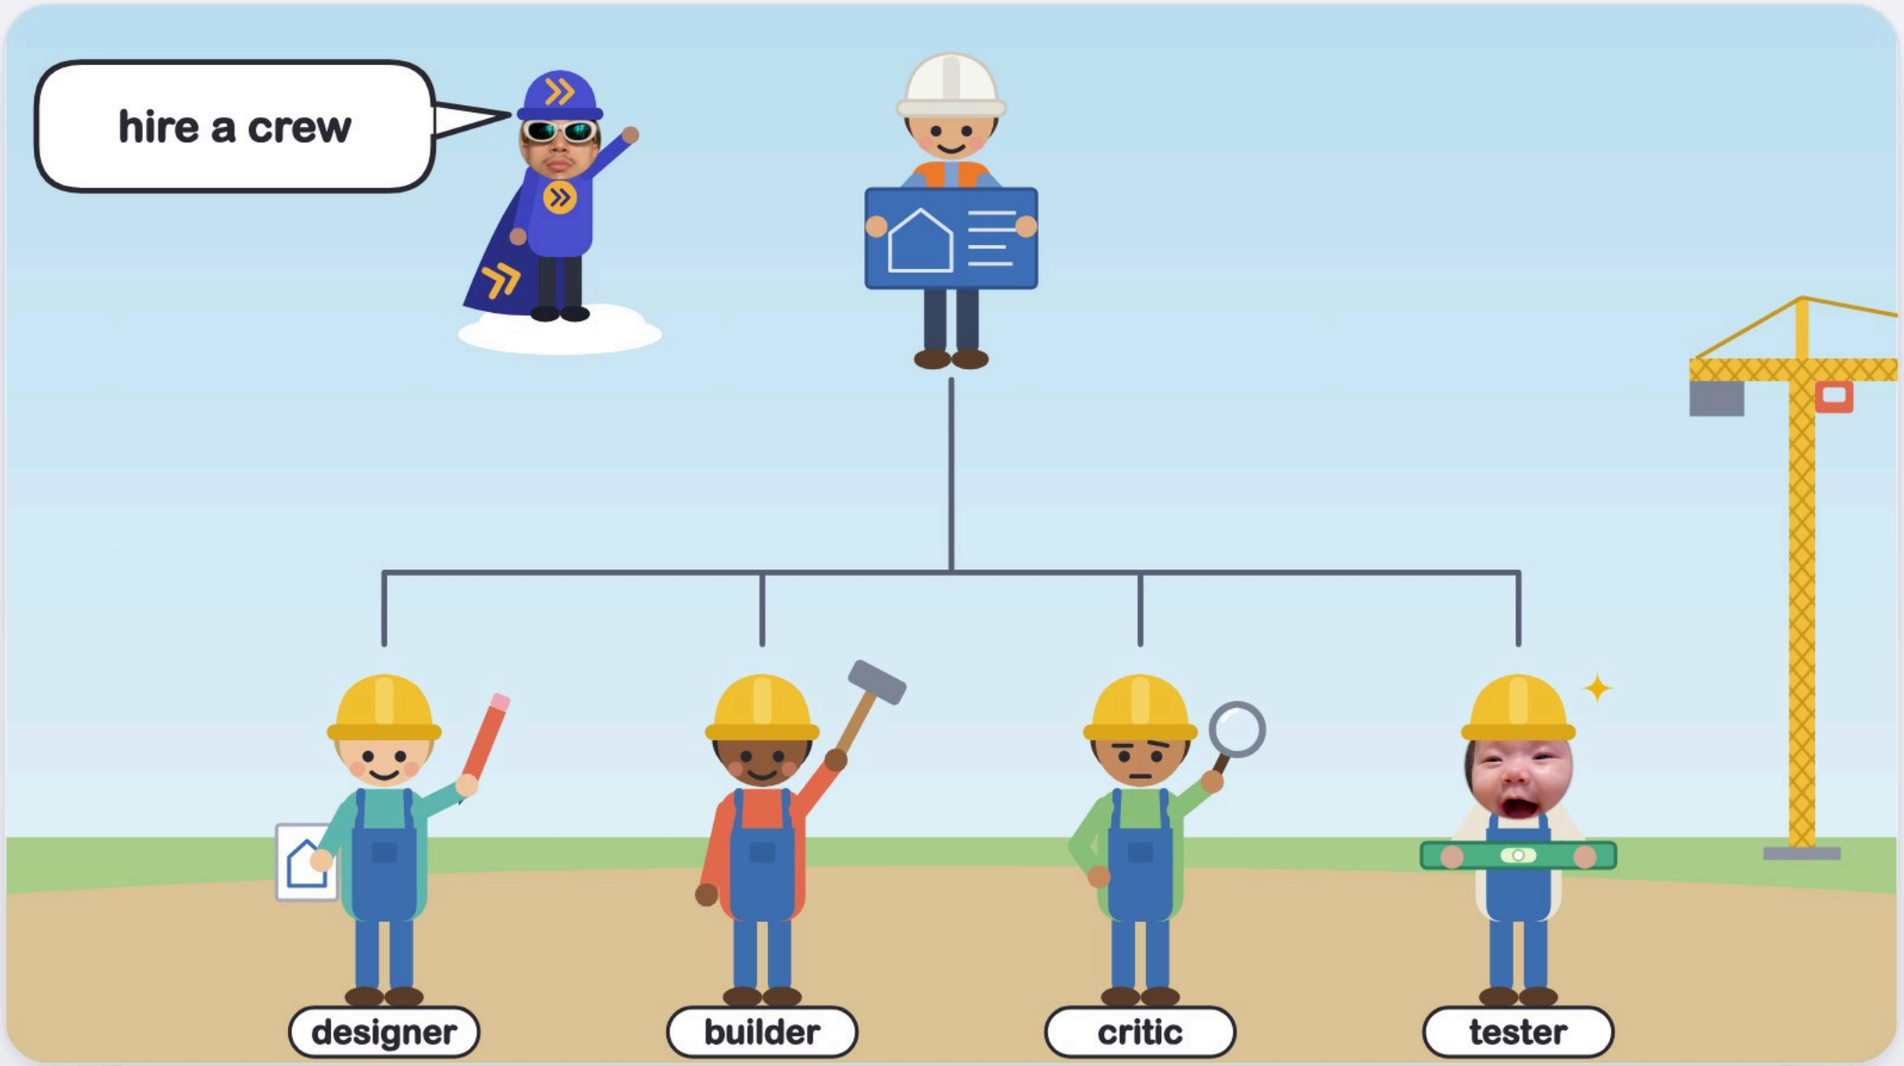

A quiet board? A bell nudges the manager.

The end-of-shift whistle:
time for a fresh manager.

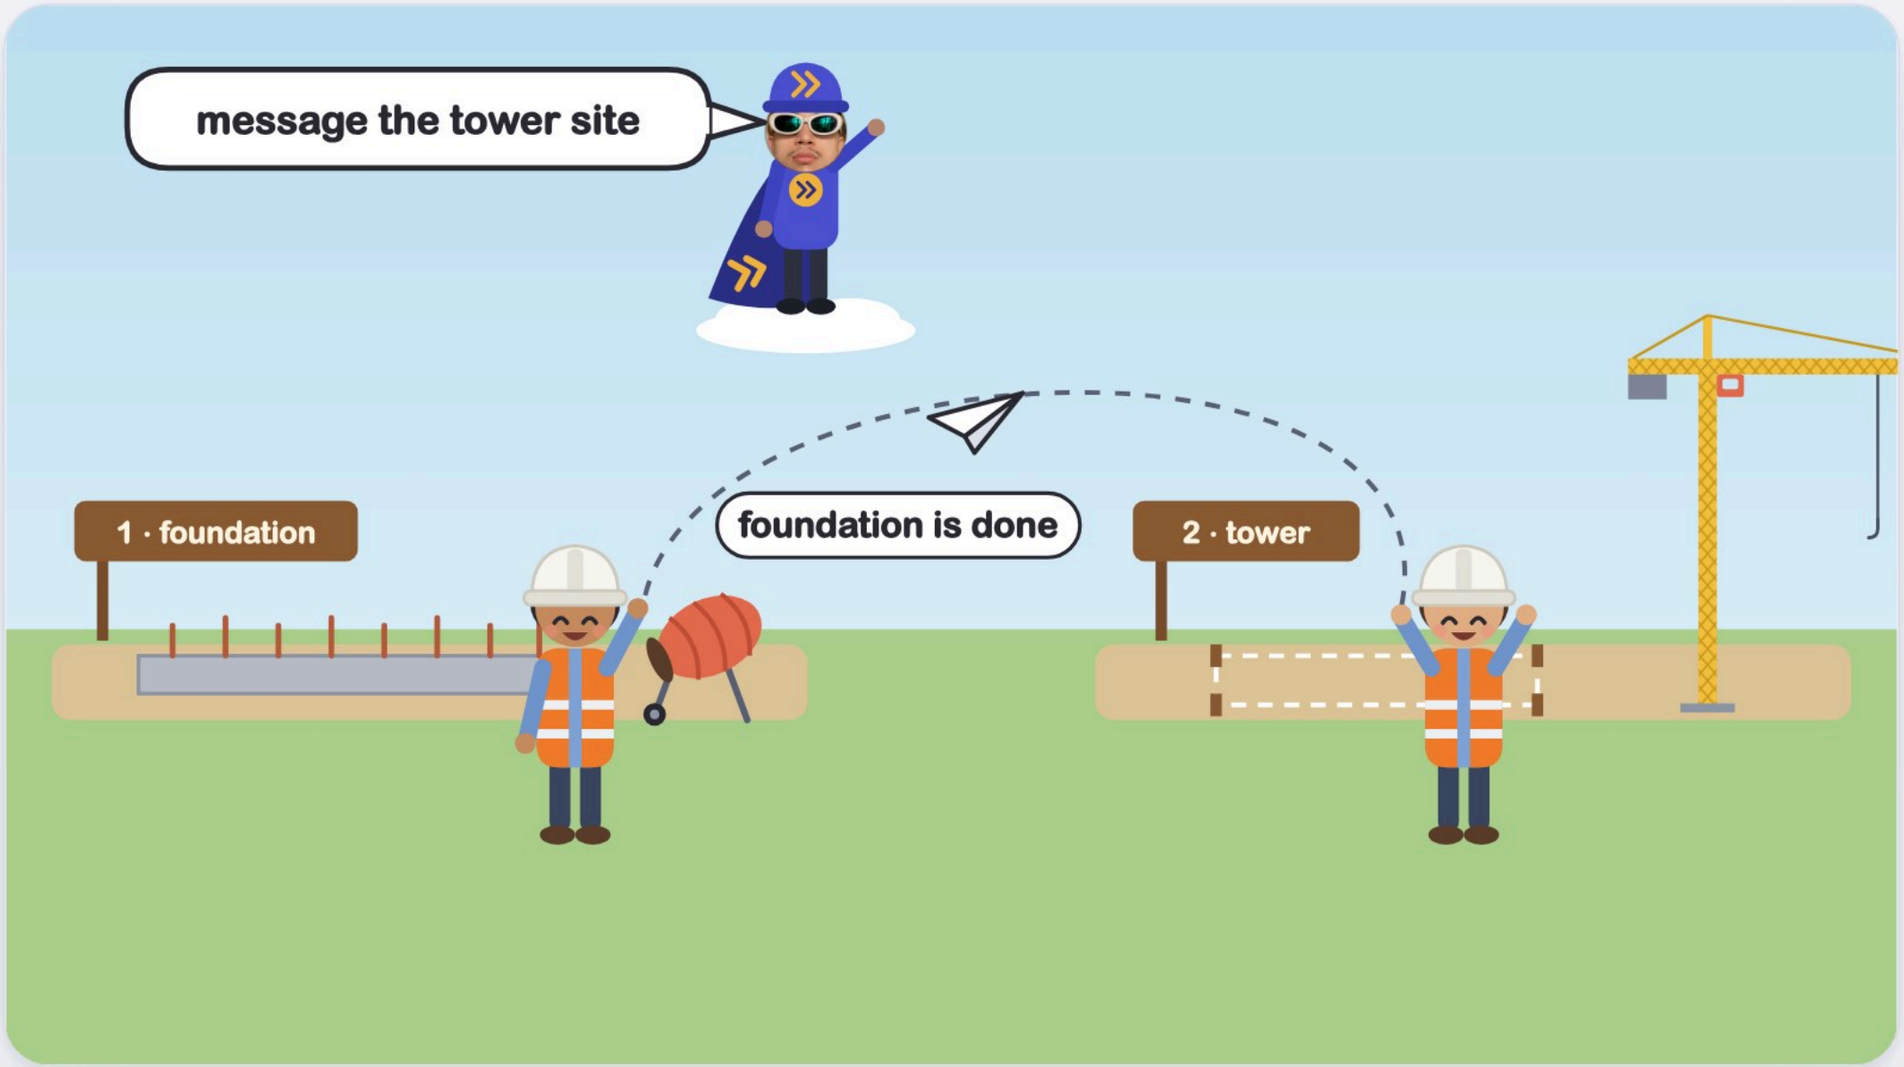

A tired manager leaves; a fresh one starts from the board.

Too much for one head? Tell the manager to hire a crew.

Before: the Director tracked every change and drafted every message.

Now: tell the managers to message each other.

We all become Directors; the work multiplies, and the city rises.

What a board looks like

2026-10-22-demo-weekly-report-export.md — OBSIDIAN

Status · updated 10-22 09:31

Now

Waiting on your direction.

Open questions

- Leave the totals row out of the CSV? (§2)
  - >> yes — 1 direct on the board

Next

- Mine: apply your answer, rerun the tests and commit.

Decisions

- The export reuses the table's query; my call (§1).

CLAUDE CODE — FOCUS VIEW

2 send >> (Enter)

>> 09:33

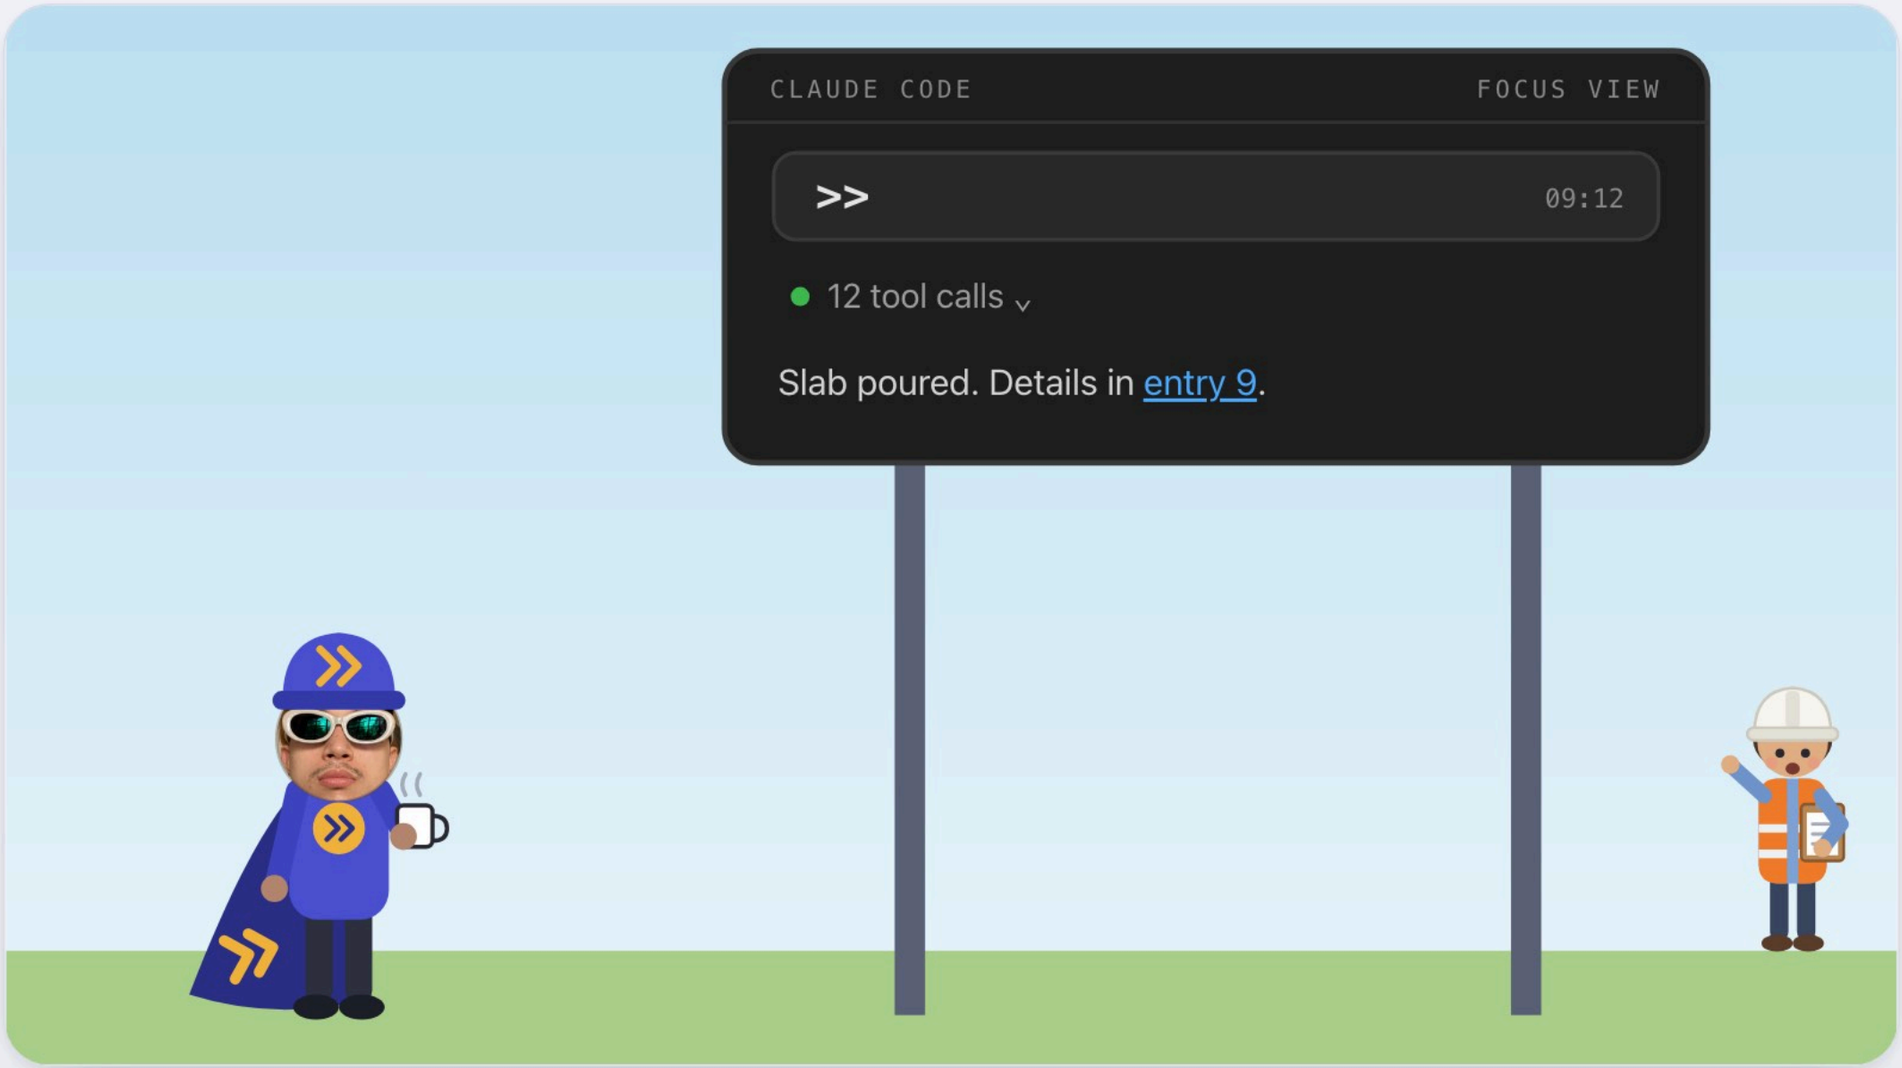

3 Claude gets to work

6 tool calls

4 one line back, with a link

On “yes”: the CSV has data rows only. Details in entry 3.

Mock-up in a real desk's format.

Hot tip: focus view folds the chatter away.

Focus view: the settings

Two VS Code settings stop the panel jumping.

Copy

```
{
  "claudeCode.focusView": true,
  "claudeCode.scrollToBottomOnSend": false
}
```

Focus view folds tool calls into one-line rows.

Scroll to bottom on send, off, stops the jump when you send.

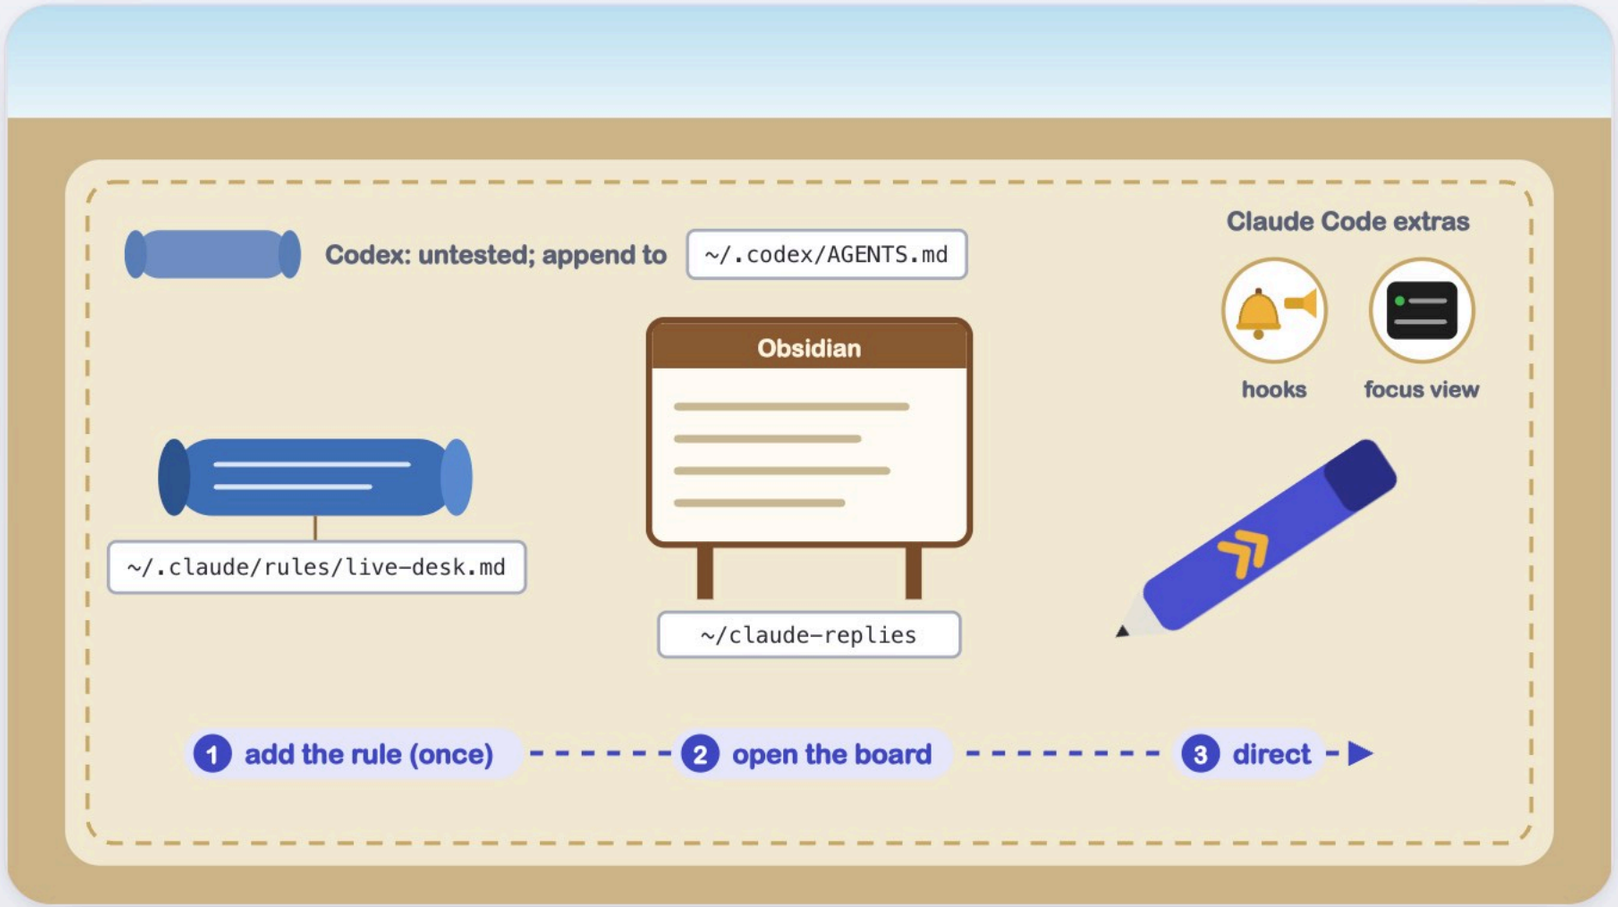

One catch: tool approvals still jump the panel. No setting fixes that.

Paste into your user `settings.json`. Checked on extension 2.1.301.

1. Add the rule once
2. Write >> where it matters
3. Direct

Try it: the details

Setup: github.com/ngnnah/I-And-AI/projects/live-desk

Allow: `"Edit(~/claude-replies/**)"` , `"Bash(open -a Obsidian ~/claude-replies/*)"` , `"Bash(date:*)"`
